Tutorial on
Systematic Literature Review for Research Design:
Application for Computer Science

Prof. Aniss MOUMEN
Ibn Tofail University, Kenitra
Morocco

In this workshop, we will present the process of Systematic Literature Review (SLR), from how to find and collect references, by identification of scientific databases and inclusion criteria. Also, we will present some good practices about how to check and appreciate scientific journals by their Impact factors and Indexation. Moreover, we will focus on how to verify predatory journals and plagiarism retraction watch. In the second step, we present how to analyze our corpus and extract the most important scientific works and how to build a thematic analysis grid. Finally, we will share our approach to construct and design a theoretical architecture from scientific works in the computer sciences field.
